Ecology of Coastal Seas (C002491)

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course offerings and teaching methods in academic year 2022-2023

- A (semester 2) English lecture 20.0 h
- Gent

Offered in the following programmes in 2022-2023

- Master of Science in Marine and Lacustrine Science and Management
  - 3 crdts
  - A offering

Lecturers in academic year 2022-2023

- De Troch, Marleen WE11 lecturer-in-charge
- N., N. co-lecturer

Teaching languages

- English

Keywords

- Coastal Seas, Ecology, Functional Biodiversity, continental shelf beds, sandy beaches, seagrass beds, rocky shores, coastal zone management.

Position of the course

To take an ecosystem approach to 'marine' coastal ecology. It will offer integrated approaches related to shallow coastal seas with a focus on case studies from European waters (North Sea, Baltic Sea, Mediterranean, Black Sea and Caspian Sea), including intertidal areas.

Contents

- This course will describe and explain processes related to rocky shores and soft substrate environments (sandy beaches, mudflats, subtidal shallow sandbanks, reef systems). Emphasis will be given on whole-ecosystem approach going from physical structure and functioning, physical-biological interactions, nutrient fluxes, food web structure, community dynamics, biodiversity threads, nature conservation and management.

- Basics in marine biology, geology, chemistry and oceanography.

- This discipline contributes to a multidisciplinary training of a marine and lacustrine scientist.

- Access to this course unit via a credit contract is determined after successful competences assessment.

- This course unit cannot be taken via an exam contract.

Teaching methods

- Lecture

Extra information on the teaching methods

- A series of case studies are documented, presented by post-doc experts in marine biology.
- remark: due to COVID19 on campus lectures can be replaced by online alternatives

(Approved)
Learning materials and price
Several handbooks and recent review articles.

References
Mann 2000: Ecology of coastal waters; several recent scientific papers.

Course content-related study coaching
Evaluation methods
end-of-term evaluation

Examination methods in case of periodic evaluation during the first examination period
Written examination with open questions, report

Examination methods in case of periodic evaluation during the second examination period
Written examination with open questions, report

Examination methods in case of permanent evaluation

Possibilities of retake in case of permanent evaluation
not applicable

Extra information on the examination methods
Calculation of the examination mark A seminar is presented by the students; interaction with the audience is in this case very important as well. Both aspects, seminar presentation, report and discussion are evaluated in equal parts.

Calculation of the examination mark
