Introduction to Marine and Lacustrine Biology (C002485)

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course Specifications

Teaching languages

English

Keywords

Algae, seagrasses, mangroves, invertebrates, vertebrates, phyto- and zooplankton, phyto- and zoobenthos

Position of the course

To convey to non-biology students an insight in all marine organisms (systematics, morphology and ecology) living in marine and lacustrine biotopes

Contents

This course will give an overview of the organisms present in marine and lacustrine biotopes with emphasis on the typical adaptations related to the environment. The following topics will be introduced and discussed:

• Diversity of photosynthetic organisms (Cyanobacteria, photosynthetic protists, macroalgae, mangroves and seagrasses)
• Organisms of the sea: plankton versus nekton
• Processes in the open sea
• Organisms of the sea bed
• The diversity of benthic marine invertebrates
• Seaweeds, seagrasses, and benthic organisms
• Benthic life habits

Initial competences

Basic knowledge in biology

Final competences

1. To get knowledge on the biology of marine and lacustrine organisms.
2. To understand ecological processes in these environments.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

(Approved)
This course unit cannot be taken via an exam contract

Teaching methods
Lecture

Extra information on the teaching methods
Classroom lectures are followed by brief interactive discussions.
remark: due to COVID19 on campus lectures can be replaced by online alternatives

Learning materials and price
all slides are online available on Ufora. handbooks (not compulsory): Graham Linda & Wilcox Lee (Algae) and Dawson Yale (Marine Botany); Levinton J.S. (Marine Biology, Function, Biodiversity, Ecology)

References
Graham Linda & Wilcox Lee (Algae) and Dawson Yale (Marine Botany); Levinton J.S. (Marine Biology, Function, Biodiversity, Ecology)

Course content-related study coaching
Opportunity for questioning the lecturers during and after the classes, and outside these via email, personal contact and via Ufora.

Evaluation methods
end-of-term evaluation

Examination methods in case of periodic evaluation during the first examination period
Oral examination

Examination methods in case of periodic evaluation during the second examination period
Oral examination

Examination methods in case of permanent evaluation

Possibilities of retake in case of permanent evaluation
not applicable

Extra information on the examination methods
Oral examination with written preparation. There are typically 2-4 questions for each part (botany, zoology). The questions seek an equilibrium between knowledge and understanding.

Calculation of the examination mark
The final score is calculated on a 50/50 basis for both parts (Botany, Zoology). Students who eschew period aligned and/or non-period aligned evaluations for this course unit may be failed by the examiner.
