Course Specifications

Law of the Sea and Protection of Oceans (C002500)

Valid as from the academic year 2022-2023

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Offered in the following programmes in 2022-2023

Master of Science in Marine and Lacustrine Science and Management

3 crdts

A offering

Lecturers in academic year 2022-2023

Willaert, Klaas

RE22 lecturer-in-charge

Teaching languages

English

Keywords

Law of the sea, maritime zones, shipping activities, natural resources, marine environment, marine spatial planning

Position of the course

This course provides knowledge and understanding of the international legal regime dealing with the oceans and seas. Taking into account the spatial division in distinct maritime zones, it discusses the regulation regarding the various uses of the sea. Specific attention is paid to the rules and principles on the protection of the marine environment and its natural resources, the international organisations involved and the current state practice. During this course, students also learn to critically assess new developments in the law of the sea within its broader political and economic context, including sustainable development goal (SDG) 14.

Contents

The course includes a general introduction to international law, as well as an overview of the different functions of the oceans and seas. Following a brief discussion on the history of the law of the sea and the main developments, the determination of baselines and the different maritime zones (internal waters and ports, territorial sea, contiguous zone, EEZ, continental shelf, high seas, the Area) are covered, including an analysis of their legal status, delineation and delimitation, the rights of states and the jurisdiction within each of these. Different functions and activities are discussed and the course focuses in-depth on the exploitation of natural resources (fisheries, non-living resources, ...) and marine environmental protection, covering general principles and mechanisms of international environmental law (principle of prevention, precautionary approach, polluter pays principle, EIA, ...) and zooming in on specific sources (land-based pollution, dumping, vessel-source pollution, pollution from seabed activities), aspects (prevention, remediation, liability) and issues (marine casualties, operational discharges, ballast water treatment, harmful anti-fouling, greenhouse gases, ...). In the end, an interactive game regarding marine spatial planning, under guidance of experts, is played to apply the rules and principles of the law of the sea and marine governance in practice.

Initial competences

Having a general interest in the oceans and seas, as well as a willingness to develop a
multidisciplinary and critical attitude

Final competences
1 Having knowledge of marine governance mechanisms and international legal rules regulating the various uses of the oceans and seas
2 Understanding the legal system of the law of the sea, how this works within the international community and which governmental organisations are involved
3 Critically assessing international marine governance from a multidisciplinary perspective
4 Evaluating actual cases at sea within the framework of the law of the sea

Conditions for credit contract
Access to this course unit via a credit contract is determined after successful competences assessment.

Conditions for exam contract
This course unit cannot be taken via an exam contract.

Teaching methods
Lecture, seminar: coached exercises

Extra information on the teaching methods
- Lecture: during the courses, students are stimulated to ask questions and to participate actively.
- Coached exercises: students apply what they have learned during the lectures (different maritime zones, rights and duties of states, exploitation of natural resources, marine environmental protection, ...) by developing a marine spatial plan within the context of an interactive board game.

Learning materials and price
- Slides [free of charge; on Ufora]
- UN Convention on the Law of the Sea 1982 [free of charge; on Ufora]

Course content-related study coaching
- Students can contact the lecturer or assistant through e-mail if they have questions or require additional explanation.
- Information regarding the exam (including an explanation of the types of questions and a number of examples) is provided during class.

Evaluation methods
end-of-term evaluation and continuous assessment

Examination methods in case of periodic evaluation during the first examination period
Written examination with open questions

Examination methods in case of periodic evaluation during the second examination period
Written examination with open questions

Examination methods in case of permanent evaluation
Participation

Possibilities of retake in case of permanent evaluation
examination during the second examination period is not possible

Extra information on the examination methods
- Written exam based on a variety of open questions to assess knowledge and insight.
- Evaluation of the active participation of the student during the MSP game.

Calculation of the examination mark
- Written exam: 80%
- MSP game: 20%

(Approved)
